Risk Management Framework

The risk management framework outlined in Field Manual FM 19 is based on the following principles:

- Risk management is an integral part of military planning and decision-making.
- Risk management is a continuous process that should be conducted throughout the planning and execution of military operations.
- Risk management is a team effort that requires the involvement of all stakeholders.

li>Risk management is an iterative process that should be updated as new information becomes available.

Risk Identification and Assessment

The first step in risk management is to identify and assess risks. This involves identifying all potential risks that could affect the mission, and then assessing the likelihood and impact of each risk. The likelihood of a risk is the probability that it will occur, while the impact of a risk is the severity of its consequences.

Risk Mitigation

Once risks have been identified and assessed, the next step is to develop and implement risk mitigation strategies. Risk mitigation strategies are actions that are taken to reduce the likelihood or impact of risks. There are a variety of risk mitigation strategies that can be used, and the best strategy will vary depending on the specific risk.

Risk Management Plans

Risk management plans are documents that outline the risk management process and provide guidance on how to identify, assess, and mitigate

risks. Risk management plans should be developed for all military operations, and they should be updated as new information becomes available.

Field Manual FM 19 Composite Risk Management is a comprehensive guide to risk management for military operations. It provides a framework for risk management that is based on the principles of risk management, risk identification and assessment, risk mitigation, and risk management plans. This manual is essential reading for any military officer or leader who is responsible for planning or conducting military operations.
